

Landcare Research Crown Research Institute - NZ Government

Since construction, the cool rooms housing the NZ Ethanol Collection (specimens collected from 1920 to present day) had consistently developed mould.

The frustrated Landcare Research team had tried virtually every mould cleaner available without success - the mould would return to the jars, shelves, walls and ceilings in a matter of days. In early 2014, Clear Mould cleaned and treated 11,444 individual jars, as well as the cool room walls, floors, ceilings, shelving and air-conditioning units using a mould removal process and exclusive Zoono® coating technology. The photos below show the incredible results.

» Before Treatment

“We’d almost given up on ever dealing with the serious mould issues in our cool rooms, but Clear Mould provided a highly effective solution, on-budget and delivered by a friendly efficient team.”

SITE MANAGER, LANDCARE RESEARCH

» After 24 Months

24 months after treatment the jars and cool rooms are still completely free from any visible mould. Clear Mould monitors the cool rooms on a monthly basis and delivers a regular scheduled Zoono treatment service to ensure ongoing protection.
